

HD THEATER SB 3

THE SOUNDBAR WITH A DISTINCT ADVANTAGE

The Klipsch HD Theater SB-3 utilizes a proven technology designed to send sound more directly to the listening area: horn-loading. By incorporating highly efficient horn-loaded technology into the SB-3 all sounds are more detailed, dialogue clarity is significantly improved and overall output is maximized to cover even the largest listening areas.

TWO-WAY DESIGN WITH PREMIUM DRIVERS

The Klipsch SB-3 utilizes lightweight aluminum tweeter diaphragms for distinctive high-frequency detail coupled with new long-throw woofers for extended mid-bass response. The tweeters are coupled to Klipsch-exclusive Tractrix® Horns to both reduce distortion and to increase dispersion more directly to the main listening area. Reduced distortion increases sonic detail while controlled dispersion sends more sound to the listening area for greater accuracy and openness.

A WIRELESS REAL SUBWOOFER

Subwoofer cabinet construction is critical for proper bass reproduction. Particleboard or, even worse, plastic subwoofer cabinets resonate in a manner that severely distorts bass, causing it to sound “boomy”. The Klipsch HD Theater SB-3 subwoofer uses a very solid MDF cabinet similar to ones built for most Home Theater applications. The sophisticated, 2.4 GHz technology automatically connects the soundbar and subwoofer together wirelessly.

EASY CONNECTION AND SETUP WITH DOLBY® DIGITAL DECODING

The Klipsch HD Theater SB-3 is designed to quickly connect to most TV's using either a digital optical connection (preferred) or an analog hookup. Using the digital optical connection, the built-in Dolby Digital decoder accepts sound from both the TV and any device (such as a DVD or BluRay player) hooked up to the TV. There is also both a 3.5 mm input, which can also be used to hook an MP3 player or other music device up to, and an RCA left/right input.

BASIC FUNCTIONS EASILY PROGRAM TO YOUR EXISTING REMOTE

You can program the Klipsch HD Theater SB-3's Volume Up and Down and Mute functions into your existing TV remote for further ease-of-operation. You also have the option of controlling all functions of the system with the included remote control.

3-D SURROUND MODE

The Klipsch HD Theater SB-3 includes a selectable 3D Surround Mode designed to simulate the effect of a surround sound system. This effect will work at multiple listening positions in your room.

SOUNDBAR PLACEMENT /WALL-MOUNT FLEXIBILITY

The soundbar cradles on its own, stylish L-shaped feet on a shelf or stand or can be wall-mounted using the included mounting template. The minimal 3” soundbar depth aesthetically matches either a wall-mounted or stand-placed TV set.

HD THEATER SB 3 SPECIFICATIONS

System Type	2-way soundbar with 10" wireless subwoofer
Frequency Response	28Hz to 20KHz +/-3dB
Power Handling	300 watts peak
Mounting Options	Two built-in keyhole mounts for wall-mounting
Max. Load Weight	Soundbar: 12.5 lbs/5.7 kg Subwoofer 25 lbs/11.3 kg
Inputs	One Optical input, One Dual RCA input, One 3.5mm input
Included	One pair of soundbar cradles, one wall-mounting template, one credit card style remote, one 4.9ft (1.5m) digital optical cable, one 4.9ft (1.5m) dual RCA cable
Tweeter	Two .78" (20mm) Aluminum compression drivers mated to dual 90° x 90° Tractrix® Horns
Midrange	Four 3.5" (8.9cm) long-throw IMG drivers
Overall Dimensions	Soundbar: 4.6" (11.7cm)H x 44"(111.7cm)W x 3.1"(7.9cm)D Subwoofer: 14.5"(36.8cm)H x 13"(33cm)W x 13.5"(34.3cm) D
Subwoofer	One 10"(25.4cm) down-firing fiber composite cone/ported enclosure
Product Finish	Soundbar: Satin Black Subwoofer: Matte Black Vinyl
